Benefits of ACT’s oral histories methodology and Terrastories application

Terrastories.io

Data ownership:
1. Because Terrastories works offline, the data can (literally) live in the community’s territory, not in the cloud;
2. Granulated ability to control which data users can view

Useful for documenting stories, languages

Enabling the transmission of traditional knowledge for generations to come; youth-friendly application

Participatory, community-driven methodology

Can benefit land reclamation and treaty negotiation processes

Useful in diverse geographic contexts

Fun to play with!
